

Dear ToxDetect Study Participant,

We have some very important and exciting updates to share about the ToxDetect Study. **Please read this carefully as it affects your participation, your schedule, and your compensation.**

WHAT HAS CHANGED

The study has been **significantly upgraded**. Here is everything you need to know:

- **Baseline Phase** / Day 0 / Baseline blood & urine testing / Central venue / At home
- **Intervention Phase** / Days 1–60 / Daily supplement period / At home
- **Final Assessment Phase** / Day 60 / Final blood & urine testing / At home
- **Results Reveal Event** / Post Day 60 / Receive results & £400 payment / Central Venue

Your urine samples will be analysed for a comprehensive panel of environmental markers — and, newly added, mycotoxin markers (mould-related compounds), providing a uniquely detailed picture of your environmental and dietary exposure.

The Results Reveal Event will be scheduled after laboratory processing of your Day 60 samples is complete. You will be notified of the date in advance.

YOUR COMPENSATION — £400

All participants will receive £400 after attendance at the Results Reveal Event.

A SPECIAL OPPORTUNITY — BE PART OF A DOCUMENTARY

The founder of MasterPeace is travelling from the USA with a professional film director to document this study for research communication and educational purposes.

Filming will take place at two points:

Day 0 — participants will be filmed during their blood draw at the venue

Results Reveal Event — participants will be invited to share their experience on camera

Participation in filming is entirely voluntary. Declining to be filmed has no effect on your participation or your £400 payment.

FULL PARTICIPANT INFORMATION SHEET

A full Participant Information Sheet is attached to this email. It contains everything you need to know about the study design, the supplement, data protection, and your rights as a participant. **Please read it before confirming your place.**

STUDY START DATE

We are planning to begin at the end of May 2026. Confirmed dates and venue details will follow very shortly.

WHAT WE NEED FROM YOU NOW

Please let us know how you would like to proceed by clicking one of the links below:

[Yes, I confirm my participation](#)

[No, I would like to opt out](#)

[I have a question before deciding](#)

If the links above do not open automatically, simply reply to this email with one word: Yes, No, or Question — and we will get back to you.

Thank you for being part of this. Your participation contributes to real, published scientific evidence on environmental detoxification — and that genuinely matters.

Warm regards,

Manu

ToxDetect Study Coordinator

On behalf of Caroline Mansfield (Study Lead) & the MasterPeace Research Team

Read enclosed Participant Information Sheet

Participant Information Sheet

Environmental Toxic Burden Study · Hertfordshire & North London · 2026

1. Introduction

You are being invited to take part in a research study examining environmental chemical exposure and selected markers of organ function over a **60-day period**. This study is designed to generate data suitable for submission to a peer-reviewed scientific journal.

Please read this document carefully before deciding whether to take part. If anything is unclear, you are welcome to ask questions before consenting.

2. Purpose of the Study

The study aims to:

- Measure selected environmental chemicals using urine toxicology testing
- Assess mycotoxin markers (mould-related compounds) via urine testing, providing additional insight into environmental and dietary exposure patterns throughout the study period
- Assess liver and kidney function using blood biomarker analysis
- Evaluate changes in these markers over a 60-day supplementation period
- Compare outcomes between participants receiving the active supplement and those receiving a placebo, under **controlled, blinded** conditions

Findings will be prepared for submission to a peer-reviewed scientific journal.

3. Why You Have Been Invited

You have expressed interest in participating and appear to meet the initial eligibility criteria:

- Based in Hertfordshire or North London
- Able to commit to a 60-day study period with two venue attendance dates
- Willing to undergo two blood draws and provide urine samples
- Not currently taking zeolite-based supplements or products with overlapping ingredients

4. What Participation Involves

If you agree to take part, you will be asked to:

- **Attend a central venue** for your Day 0 baseline blood draw
- Provide two urine samples using two home collection kits at Day 0 and Day 60 — analysed for environmental chemicals and mycotoxin markers
- Take a daily study supplement (or placebo) for 60 days as instructed
- **Home phlebotomist visit** for your Day 60 blood draw
- **Attend a Study Completion Results Appointment** (scheduled after laboratory processing is complete) to receive your personalised results and compensation
- Maintain your usual diet and lifestyle throughout the study period where possible
- Record basic lifestyle information at each testing point via a short questionnaire

All blood draws are carried out by a qualified, registered phlebotomist. Each appointment takes approximately 20 minutes.

5. Study Schedule

Timepoint	What happens	Location
Baseline Phase	Baseline blood testing	Central venue
Day 0	Baseline urine testing	At home
Intervention Phase	Daily supplement period	At home
Days 1–60		
Final Assessment Phase	Final blood testing	At home
Day 60	Final urine testing	
Post Day 60 (TBC)	Study Completion Results Appointment. Receive your results · £400 payment	Central Venue

*The exact date of the **Study Completion Results Appointment** to be confirmed (TBC) once laboratory processing is complete.*

6. Study Design

This is a **randomised, placebo-controlled, blinded study**. You will be randomly assigned to one of two groups:

- **Active group** — receives the MasterPeace supplement daily for 60 days
- **Placebo group** — receives an identical-looking placebo for 60 days

Neither you nor the study team will know which group you are in during the study period. This blinded design is a scientific standard used to ensure objective, unbiased results.

At the end of the study, **participants in the placebo group will receive the full MasterPeace supplement**, giving this group the opportunity to benefit from the product after the study concludes. The placebo group will be invited to continue the study for another 60 days where they will complete once again the blood test and two urine tests giving them the opportunity to experience the detoxification effect of MasterPeace and whereby the groups final test results will also be included in the scientific paper.

All study participants will receive a further 2 bottles of MasterPeace upon completion of the study in order to continue your detox journey.

Group assignment and individual results will remain confidential at all times.

7. About the Study Supplement — MasterPeace

The supplement used in this study is **MasterPeace**, a natural mineral formulation developed by Human Consciousness Support (HCS). It combines clinoptilolite zeolite and sea mineral plasma, taken as a daily liquid supplement.

Clinoptilolite zeolite is a naturally occurring volcanic mineral with a well-documented detoxification profile confirmed by multiple peer-reviewed studies. MasterPeace has been used by hundreds of thousands of people internationally.

Published peer-reviewed research on MasterPeace has demonstrated reductions in:

- Heavy metals (aluminium, lead, and others)
- Per- and polyfluoroalkyl substances (PFAS / forever chemicals)
- Microplastics
- Glyphosate
- Graphene oxide

Full reference list: <https://masterpeacebyhcs.com/our-studies>

8. Participant Compensation

In recognition of your time and commitment, **all participants will receive £400** after attending the **Study Completion Results Appointment**.

Participants will also be invited to take part in a professional video documentary of the study. Participation in filming is entirely voluntary and does not affect your compensation or your data.

9. Video Documentation

This study is being professionally documented on film. The founder of MasterPeace will be present with a professional film director to record elements of the study for research communication and educational purposes.

Filming will take place at two points:

- **Day 0 venue** — participants will be filmed during their blood draw
- **Study Completion Results Appointment** — participants will be invited to share their experiences and reactions on camera

Participation in filming is **entirely voluntary**. Declining to be filmed will have no effect on your participation, your results, or your compensation.

10. Potential Risks and Considerations

- Blood draw with the phlebotomist may cause mild and temporary discomfort, bruising, or light-headedness
- MasterPeace is a non-pharmaceutical product and has been well tolerated in previous studies. A small number of individuals report mild, temporary symptoms (such as headache or fatigue) when beginning supplementation. If this occurs, the study team will provide guidance including dosage adjustment
- There is no guarantee of personal health benefit from participation
- This study is for research purposes only and does not constitute medical treatment or advice

11. Potential Benefits

As a participant you will receive:

- A detailed urine environmental toxicology report
- A detailed mycotoxin toxicology report
- Liver and kidney function blood test results (with clinical interpretation)
- £400 compensation on completion of all tests and following attendance to the Results Reveal Event
- The opportunity to contribute to peer-reviewed scientific research

12. Confidentiality and Data Protection

Your personal data will be handled in strict accordance with **UK GDPR** regulations.

- Your individual results will remain confidential at all times
- All data used for research or publication will be fully anonymised and cannot be traced back to you
- Your data will be stored securely and accessed only by the study team
- You may request access to or deletion of your personal data at any time

13. Voluntary Participation and Right to Withdraw

Participation in this study is **entirely voluntary**. You may withdraw at any time and without giving a reason. Withdrawal will not affect your access to any test results already collected up to the point of withdrawal.

14. Study Organisation and Funding

This study is directed by **Caroline Mansfield**, registered naturopath and research co-director.

The study is commissioned and funded by **Human Consciousness Support Ltd (HCS)**.

All laboratory testing is conducted through accredited third-party laboratories with physician review on blood test results.

15. What Happens Next

If you would like to proceed:

- Book a short introductory call with study coordinator Caroline using the link provided in your invitation email
- Following the call, you will receive an **Informed Consent Form** via our secure, GDPR-compliant clinical system
- Once consent is received, you will receive a study onboarding email with full instructions
- Your Day 0 venue appointment will be confirmed by the study team
- You will receive your urine collection kits, supplement or placebo, and full instructions before the study begins

If you have questions before booking, please reply to your invitation email and we will respond promptly.
